nishant.kumar83358@gmail.com — github.com/kazuaki83358

Education

Delhi Technical Campus (GGSIPU), Greater Noida

Expected May 2027

Bachelor of Technology in Computer Science Engineering

CGPA: 8.5/10

DSEU Ambedkar Shakarpur Campus, Delhi

May 2024

Diploma in Electronics & Communication Engineering

CGPA: 7.5/10

Technical Skills

Languages: Python, Kotlin, Java, JavaScript

Android: Jetpack Compose, Android SDK, Firebase, REST APIs, DataStore

Backend: Flask, SQLite, Supabase, ChromaDB, LangChain, Gemini API

Tools: Git, GitHub, Linux, Android Studio, Retrofit, OkHttp, Postman

Core CS: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

Quick Safety Service — Full Stack Developer

2025 – Present

- Launched a service-booking platform supporting 6 service categories including Security Guards, Bouncers, Electricians, Attendants and PSO services.
- Delivered 15+ Flask REST APIs integrated with Supabase for booking management, worker onboarding and document storage.
- Implemented document verification workflows handling 500+ uploaded records including Aadhaar, PAN and profile documents.
- Reduced manual worker onboarding effort by approximately 70% through streamlined approval and verification workflows.

Projects

Nyaya AI – AI-Powered Indian Legal Assistant

Kotlin, Flask, ChromaDB

- Engineered a Retrieval-Augmented Generation (RAG) legal assistant indexing 4 Indian legal acts into 1,000+ searchable vector chunks for semantic retrieval.
- Enabled legal query resolution in 3 languages: English, Hindi and Hinglish.
- Designed 10+ Jetpack Compose screens with reusable UI components and optimized state management.
- Reduced repeated API requests by approximately 40% through efficient caching and architecture improvements.

JobEase – Job Aggregator & Automation Platform

Python, Flask, SQLite

- Created a job aggregation platform collecting 150+ job listings daily across Android, Web and Python domains.
- Orchestrated daily scraping, database updates and email notifications using APScheduler.
- Architected relational database schemas storing 1,000+ job records for efficient filtering and retrieval.
- Reduced manual job search effort by approximately 80% through scheduled job discovery workflows.

SOS Emergency Assistance App

Kotlin, Firebase

- Implemented an Android safety application delivering SOS alerts with live GPS coordinates in under 3 seconds.
- Integrated Firebase real-time synchronization for emergency communication between multiple users.
- Improved location accuracy by approximately 30% using optimized location request strategies.
- Reduced UI code by 30% through reusable Jetpack Compose components.

Leaf Classification Web App

Flask, PyTorch, MobileNetV2

- Trained and deployed a MobileNetV2 model capable of classifying 42 plant species.
- Designed an inference pipeline generating predictions within 2 seconds of image upload.
- Established a knowledge base containing 42 medicinal plant profiles with Hindi names and medicinal information.
- Crafted a responsive Bootstrap-based interface supporting image upload, preview and classification results.

Achievements

- Solved 100+ Data Structures and Algorithms problems covering Arrays, Hashing, Sliding Window and Two Pointers.
- Competed in Manthan Kriti Hackathon 2025 and delivered a functional prototype within 24 hours.
- Possess 3+ years of Linux experience using Arch Linux, Git and open-source development workflows.
